PROFESSIONAL SUMMARY

Data Analytics and AI student with hands-on experience building end-to-end analytical pipelines, designing interactive dashboards in Tableau and Looker Studio, and surfacing actionable business intelligence from complex multi-source datasets. Proficient in Python, SQL, Pandas, NumPy, Matplotlib, Google Sheets, and Tableau with a strong foundation in statistical analysis, KPI framework design, and data storytelling. Passionate about bridging raw data and business decisions through rigorous EDA and clear visual communication. Solved 250+ DSA problems; actively exploring applied ML and explainable AI systems.

EDUCATION

Bachelor of Technology (Artificial Intelligence) <i>Newton School of Technology, Rishihood University Grade: 7.5/10.0</i>	2024 – 2028
Intermediate (Class XII) <i>Kendriya Vidyalaya Tagore Garden Grade: 80.0%</i>	2022 – 2023
Matriculation (Class X) <i>Kendriya Vidyalaya Tagore Garden Grade: 85.0%</i>	2020 – 2021

PROJECTS

Chocolate Sales Performance Analysis & Business Intelligence (Github Dashboard)	April 2025
- Designed an end-to-end analytical pipeline on a 5,000+ transaction retail dataset spanning five interconnected CSVs (sales, products, stores, customers, calendar) — performing data extraction, cleaning, deduplication, type-casting, and relational joins in Python and Pandas to build a star-schema-ready processed dataset optimised for downstream BI consumption. - Engineered a KPI framework covering Total Revenue, Gross Margin %, MoM Growth, Average Order Value, Repeat Purchase Rate, Store Performance Index, and Top-10 SKU rankings — implemented via validated Pandas aggregations and statistical notebooks to ensure full reproducibility and leakage prevention. - Built and published a multi-view interactive Tableau dashboard with drill-down filters across Product Category, Store Region, Customer Gender, and Age Band — surfacing insights on revenue concentration, demographic spend patterns, Q4 seasonality spikes, and negative-margin SKUs; delivered five data-backed recommendations to guide budget reallocation and inventory planning.	
Uber Trip Data Analysis — Urban Mobility & Demand Intelligence (Github)	March 2025
- Processed and cleaned a large-scale Uber rideshare dataset using Python and Pandas — resolving missing values, parsing datetime fields, and engineering time-based features (hour-of-day, day-of-week, month) to structure data for multi-dimensional demand pattern analysis across urban geographies and temporal segments. - Performed statistical analysis to uncover peak demand windows, high-density pickup zones, trip duration distributions, and seasonal ridership trends — applying groupby aggregations and correlation analysis to identify supply-demand gaps and optimal driver deployment windows. - Designed a Tableau Desktop dashboard visualising trip volume heatmaps, hour-level demand curves, geographic pickup concentration, and weekday vs. weekend ridership comparisons — translating raw mobility data into operational insights supporting route planning and surge pricing strategy.	

SKILLS

Programming Languages: Python, SQL, HTML, CSS, JavaScript
Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Tableau, Looker Studio, Google Sheets, Jupyter Notebook
Machine Learning: Scikit-learn, XGBoost, TF-IDF, Linear SVM, NLP Pipelines
Databases & Tools: MySQL, MongoDB, PostgreSQL, Git & GitHub, Postman, Google Colab, Firebase

EXTRA-CURRICULAR ACTIVITIES

Smart India Hackathon (SIH) 2025 — Selected at college level; collaborated in a cross-functional team to design a full-stack civic engagement application for a Jharkhand public governance problem — enabling issue reporting via live image capture and community voting on a public dashboard under competitive timelines, demonstrating data-driven product thinking at scale.
